

2 System Requirements

2.1 Hardware

The ICT Instrument software does not require a powerful computer.

Recommended Minimum System Specifications:

Intel Atom 1.66 GHz and 1GB RAM or higher.

2.2 Software

The ICT Instrument software is compatible with the following Operating Systems:

Windows Vista

Windows 7

Windows 8 and 8.1

Windows Virtual OS run from a Mac computer

2.3 Screen Resolution

The ICT Instrument software has been designed to run in a fixed window size of 857 x 660 (it does not Auto Resize) and works best on current model laptops that have a screen size of 11.6" or larger and a native screen resolution of 1366 x 768 or larger.

This means on small netbooks and some old laptops with a screen resolution of less than 1366 x 768, the bottom 5 or 10% of the screen is cut off or obscured from view. This can significantly limit software functionality.
