

ICT International's BHM1 for real time monitoring of Bee hive health and productivity.

The BHM1

(Bee Hive Meter) Measures:

- Hive humidity
- Hive temperature
- Hive weight
- Meteorological: Rainfall, Temperature, Solar Radiation (Optional)

Data accessible remotely through a secure Dataview Software. Graphs can be generated for selected periods for trend observation and comparative analysis of data within a colony as well as between different colonies.

- Precision: High accuracy sensors, monitoring hive weight to $\pm 1g$ (<120kg).
- Reliable: Power and data transfer options to any site conditions.
- High resolution: User defined measurement intervals, maximum frequency of 1minute.
- Flexible: Sensor configurations to meet user requirements.

The BHM1 allows you to monitor colony strength, hive productivity and the influence of external environmental factors on colonies in different locations.
